

Sizing

The most accurate sizing method is to measure your overall feet length (heel against a wall and measure out to the end of big toe) and compare against the boot's inside length measurement (listed below). The inside length should be at least 3/4 inch (15-20mm) longer than your feet. This measurement gives you the correct toe clearance for safety and comfort.

95% of our customers receive the correct size first time, but if you find that you need to exchange, please DON'T PANIC, we will work quickly to exchange sizes for you. So feel confident to buy right now and you will be impressed with our boots, and our customer service!
